

bidim®

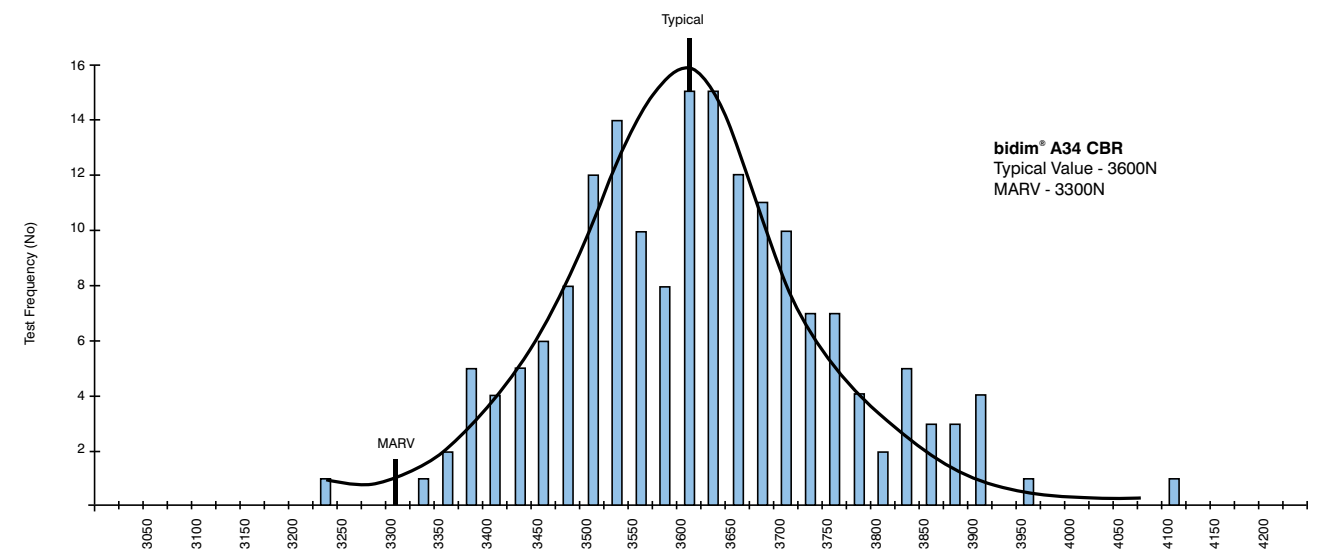

Technical Data Sheet

**Polyester Geotextiles
made in Australia
from recycled polymer**

Definition of Terms

- ISO accreditation** ISO standards serve to safeguard consumers and users of products and services in general. Standards raise levels of quality, safety, reliability and efficiency.
- Machine Direction (MD)** The direction in a machine-made fabric, parallel to the direction of motion of the material through the processing machine i.e. along the length of the roll.
- Cross Machine direction (XMD)** The direction in a machine made fabric, perpendicular to the direction of motion of the material through the processing machine i.e. across the width of the roll.
- Typical Value** A typical value is the arithmetic mean of a set of results, see diagram below. This implies that 50% of the tested specimens will typically exceed this value and 50% will typically not meet this value.
- Minimum Average Roll Values (MARV)** MARV is a statistical derivation for any distribution of data. It is defined as the mean or typical value less 2 standard deviations, (refer to diagram below). Mathematically it is implied that 97.5% of the tested specimens will exceed the MARV value.

Indicative Results Spread
(for a given test method for a given period of time)

IMPORTANT NOTICE

The information contained in this brochure is general in nature. In particular the content of this brochure does not take account of specific conditions that may be present at your site. Such conditions include the soil composition, topography, land stability, climate, the present or proposed use of the site and adjacent lands- and many other factors. Those site conditions may alter the performance and longevity of the product and in extreme cases may make the product wholly unsuitable. Any data or specifications contained in this brochure are values obtained in our laboratory. Actual dimensions and performance may vary. If your project requires accuracy to a certain specified tolerance level you must advise us before ordering the product from us. We can then advise whether the product will meet the required tolerances. Where provided, installation instructions cover installation of product in site conditions that are conducive to its use and optimum performance. If you have any doubts as to the installation instructions or their application to your site, please contact us for clarification before commencing installation. In all cases we recommend that advice be obtained from a qualified consulting engineer before proceeding with installation. © Copyright held by Geofabrics Australasia Pty Ltd. Specifications

Issue Date February 2009

bidim® Geotextiles – Typical and MARV Values

bidim® geotextiles are manufactured in accordance to ISO 9001:2000, Cert No: QEC1773

All bidim® “A” Range non-woven, needle punched, continuous filament, polyester geotextiles are made in Australia from recycled polymer.

Test		Standard	Units	A12	A14	A19	A24	A29	A34	A39	A44	A49	A64

The product properties listed on this sheet include both **Typical** and **Minimum Average Roll Values (MARV)** for machine and cross machine directions (MD/XMD), definitions of these terms are included on the reverse side of this data sheet. All testing has been carried out by a NATA accredited laboratory, copies of test certificates are available on request.
